

Low-Volume Cymbals

LVCP5000 / 14914

Features and Benefits

LVCP5000 Low-Volume Cymbals enable quiet, hearing-safe practice by reducing volume by about 70 percent compared to standard cymbals. Precision crafted from high-quality stainless steel, they maintain the familiar cymbal timbre and feel, making them a great choice for live performance in smaller venues where drummers may wish to avoid playing at higher volumes. The set includes a pair of 14" hi-hats, a 16" crash, an 18" crash, and a 20" ride, providing a wide range of sounds and rhythm options. They work perfectly with any drum kit as a drop-in replacement for traditional cymbals and they look the part as well, featuring a polished silver finish, perforated to produce less volume without the need for additional damping materials such as towels or drum mutes. Whether used for unobtrusive practice at home, as a hearing-safe tool for teaching the craft to beginners, or to control dynamics in practice rooms, clubs, and recording studios, these cymbals deliver consistent tone and durability for long-lasting creative inspiration and enjoyment.

Specifications

Size: 14" (pair), 16", 18", 20"
