

LIGHTING O-CLAMP

LTA9900

FEATURES AND BENEFITS

The LTA9900 Lighting O-Clamp completely wraps around truss tubing to securely mount PAR cans, LED lights, and other light fixtures. Its 28-pound weight capacity provides more than enough strength to support most light fixtures, ensuring lighting setups are reliable and safe. While the clamp itself snugly fits around 2" truss tubing, two adapters are included that also enable use with 1" and 1.5" truss tubing. Made of strong nonmetallic material, it won't scratch or dent trusses or other equipment. With its black finish, this versatile accessory adds to a professional presentation in any venue, recording studio, or streaming setup.
