

GS8200

HANG-IT!™ ProGrip II Guitar Stand

GUITAR STANDS & ACCESSORIES

FEATURES AND BENEFITS

The GS8200 combines the security and convenience of an auto-locking yoke with the ease of the Hang-It™ design. Simply hang your guitar on the patent-pending yoke and the weight of your guitar draws the spring-loaded yoke arms to pull the gates of the yoke shut, all in one single action! Removal is just as easy; picking up your guitar opens the gates instantly. Improved features include a purple designer cam locking mid-point clutch and reinforced leg housing. Other features include inert rubber padding, reinforced tripod leg braces, and non-slip rubber end caps.

The spring-loaded yoke design is constructed of reinforced ABS plastic, which supports any guitar or similar stringed instrument.

Low-profile cam-locking clutch holds up to 40 lbs. and adjusts stand height from 30"-43".

Tripod folding leg base allows for quick and easy set-up and storage. All 3 legs will open and close at the same time.

Reinforced leg braces for max support and stability.

Non-slip rubber end caps.

ProGrip Locking Yoke

The design of the patent-pending yoke system not only locks your guitar in place, but also allows for easy one-handed operation. A special-formulated inert rubber lines the upper yoke; it contains no reactive agents or stabilizers, making it the new standard for high-end instrument stands.
