## Lower Rocker Lug on 12" Heavy Duty Round Base Mic Stand

MICROPHONE STANDS & ACCESSORIES

### FEATURES AND BENEFITS

The 12" MS8412 offers a new choice in straight stands...the Rocker-Lug! The Rocker-Lug allows the upper mic shaft to tilt up to 15° off of the base vertical, so there is no need for a boom arm in many applications. Other pro-level features include a 10-pound 12" base and a heavy-duty over-sized solid zinc mid-point clutch. The low-profile 12" base sports 6 rubber feet for stability and noise reduction. And because this stand is made for the working musician, shaft/base connection is made via a solid steel lug with coarse M20 threading. This coarse threading provides an excellent combination of fast assembly and secure connection, while extending thread wear far beyond fine-thread designs. Patent-pending design.

5/8" -27 solid steel threaded upper lug with locking washer.

Oversized zinc die-cast clutch adjusts the height from 41 - 69". Entire upper shaft slides down inside the lower shaft for storage/transport.

Lower-Lug tilts the shaft 15° off of the base vertical. No boom arm needed!

Cast iron base with M20 threading and 6 rubber feet for added stability.

The Rocker-Lug
