

UPPER ROCKER LUG ON 10" ROUND BASE MIC STAND MS8310 | 12570

5/8"-27 solid steel threaded upper lug with locking washer.

Rocker-Lug tilts the upper shaft 40° off of the vertical. No boom arm needed!

Oversized zinc die-cast clutch adjusts the height from 36 - 65". Entire upper shaft slides down inside the lower shaft for storage/transport.

Cast iron base with M20 threading and 6 rubber feet for added stability.

FEATURES AND BENEFITS

The 10" MS8310 offers a new choice in straight stands...the Rocker-Lug! The Rocker-Lug allows the upper mic shaft to tilt up to 40° off of vertical, so there is no need for a boom arm in many applications. Plus, the Rocker slides down effortlessly into the clutch for straight stand applications and for compact storage/transport. Other pro-level features include a 6-pound 10" base and a heavy-duty over-sized solid zinc mid-point clutch. The low-profile 10" base sports 6 rubber feet for stability and noise reduction. And because this stand is made for the working musician, shaft/base connection is made via a solid steel lug with coarse M20 threading. This coarse threading provides an excellent combination of fast assembly and secure connection, while extending thread wear far beyond fine-thread designs. Patented design.

Our new Rocker-Lug eliminates the need for an added boom arm, yet keeps your setup neat and compact when space is tight on stage or packing up for storage/transport.

PRODUCT SPECIFICATIONS

Height Adjustment	36 - 65"
Angle Adjustment	40°
Base Diameter	10"
Base Weight	6 lbs.
Color	Black powder coat finish
